Single: Transmittance for a single film

Parallel: Transmittance for a double film, axes parallel

Crossed: Transmittance for a double film, axes crossed

Vikuiti® Polarizer: HN38S \*

Type: Neutral linear polarizer

Features: Very high efficiency linear polarizer for the visible spectrum. Specially formulated to eliminate blue leak in the crossed (extinction) position.

Typical applications: Recommended for applications where a very high extinction density in the crossed position is as important as a high transmittance value in the parallel orientation.
